## DETAILED ACTION

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5 and 28-31, drawn to a nucleic acid purification method wherein a nucleic acid capturing tip incorporating the solid phase containing a nucleic acid capturing agent is used to allow said solid phase to capture a nucleic acid and to extract the nucleic acid, classified in class 536, subclass 22.1.
  - II. Claims 12-27, drawn to drawn to a nucleic acid purification apparatus, classified in class 422, subclass 255.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case nucleic acids may be purified using the apparatus disclosed in Japanese Official Patent Gazette 266864/1999 (page 2, lines 11-25 of instant specification).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
